Karthick N

Senior QA Engineer / SDET — Python, Playwright, API, CI/CD

karthick7140341@gmail.com · +91 6380334553 · Chennai, India · linkedin.com/in/karthick-n-qa · github.com/Karthick-71

Immediate Joiner

Professional Summary

Senior QA Engineer / SDET with 4.5+ years designing and scaling Python-based test automation frameworks for SaaS and enterprise applications. Experienced in UI, API, functional, and regression testing across web, desktop, and backend systems. Skilled in Playwright, Pytest, REST API automation, CI/CD integration, performance testing, and data validation. Immediate joiner.

Technical Skills

Languages & Test Automation: Python, SQL, Playwright, Pytest, Pywinauto, Test Automation Frameworks
Testing & API: Functional, Regression, End-to-End, Smoke, Sanity, UI/API Testing, REST API, Postman, API Automation
Framework & Strategy: Test Automation Strategy, Test Framework Design, Data-Driven Testing
Performance & CI/CD: Locust, Load Testing, Performance Validation, Jenkins, Continuous Integration, CI/CD, Git
Cloud & Data: AWS, Pandas, Excel Automation, CSV/Excel Processing, Data Validation, Data Migration, VBA
Agile & Tools: JIRA, QA Touch, Agile, Scrum, Defect Tracking, Reporting, Process Optimization

Professional Experience

Senior QA Engineer (Data & Automation)
Mako IT Lab · Oct 2025 – Jul 2026

- Engineered Python + Pandas validation pipelines for large-scale system migrations, processing 100K+ records across CSV/Excel datasets with automated reconciliation against source-of-truth REST APIs.
- Automated bulk REST API operations (create, update, sync) cutting manual data-entry effort by 80% and eliminating cross-system data drift during enterprise go-lives.
- Built workflow validation suites that surface data-integrity defects pre-cutover, reducing post-migration hotfix tickets and improving release confidence.

Software Quality Assurance Engineer
Freightify — SaaS platform for global freight pricing · Apr 2023 – Sep 2025

- Architected a Python + Pytest test automation framework with modular fixtures and data-driven testing; scaled to 1000+ automated regression test cases covering pricing, rate-management, and quote workflows across a multi-tenant SaaS platform.
- Owned end-to-end functional, regression, and API test coverage across web, desktop, and backend services; investigated test failures via log analysis and partnered with developers to drive defects to resolution.
- Integrated the suite into Jenkins CI/CD and Continuous Integration pipelines as a release gate, reducing regression cycle time from 2 days to under 4 hours and catching breakages before merge.
- Led a performance-testing POC with Locust and Postman, profiling backend response times under concurrent load and surfacing 3 latency hotspots routed back to engineering.
- Collaborated with PMs and developers in Agile/Scrum sprints to define acceptance criteria, review user stories, track defects, and estimate test effort during sprint planning and grooming.

Software Test Engineer
Freightify · Jan 2022 – Mar 2023

- Designed and executed UI, API, functional, regression, and end-to-end test cases across web, mobile, and desktop modules, helping establish the foundation of the team's automation strategy.
- Built API-level Python automation that replaced manual validation for high-volume rate-update workflows, lifting automated regression coverage and shortening release verification.
- Automated Excel-based file-processing flows using Pandas and developed Pywinauto scripts for legacy desktop application testing.

Data Analyst
Freightify — Includes 6-month internship (Mar – Aug 2021) · Mar 2021 – Dec 2021

- Standardized and audited carrier rate sheets in Excel, resolving recurring data-quality issues and improving downstream system accuracy.
- Optimized daily processing workflows and delivered executive-facing reports while meeting strict SLAs.

Professional Skills

Test Strategy & Framework Design: Design scalable, maintainable test automation strategies and modular test frameworks for enterprise applications.
Defect Analysis & Root Cause Investigation: Systematic debugging across UI, API, and data layers using log analysis, troubleshooting, and defect tracking.
Stakeholder Collaboration: Translate ambiguous requirements into testable acceptance criteria with PMs, developers, and business teams; comfortable working across time zones.
Ownership & Continuous Learning: Drive quality improvements end-to-end and rapidly adopt new frameworks, domains, and testing tools.

Education

University of Madras · B.Com in Corporate Secretarialship — First Class · 2017 – 2020
